Tissue specificity:

Smooth muscle tissues and in some, but not all, nonmuscle cells..

Subcellular location:

Cytoplasm, cytoskeleton. Cytoplasm, cell cortex.

Function:

Myosin regulatory subunit that plays an important role in regulation of both smooth muscle and nonmuscle cell contractile activity via its phosphorylation. Implicated in cytokinesis, receptor capping, and cell locomotion (PubMed:11942626, PubMed:2526655). In myoblasts, may regulate PIEZO1-dependent cortical actomyosin assembly involved in myotube formation (By similarity)..
